YaraTera™ CALCINIT™

YaraTera CALCINIT			
Total Nitrogen (N)	15.5	Solubility (10°C)	2000g/l water
as nitrate	14.4	pH (10% solution)	6.0
as ammonium	1.1	Colour	White
Calcium (Ca)	19.0	EC (1g/ l at 25°C)	1.2mS/ cm

* Values expressed as % w/w

Product Performance

Specifically manufactured for fertigation, YaraTera CALCINIT is a fully water soluble source of calcium and nitrogen. It is quick to dissolve in water without leaving any residues and can be used in all fertigation systems, including drip, sprinklers and centre pivot irrigators.

YaraTera CALCINIT provides all the benefits of fast-acting highly available nitrogen, with the improved harvest quality characteristics of calcium.

The balance of calcium and nitrate nitrogen in YaraTera CALCINIT ensures that growth is maximised and that produce quality is not compromised. It is used on a range of high value crops to ensure stress-free growth and high yielding, highly marketable, top grade produce.

YaraTera CALCINIT can be mixed with other water soluble fertilisers, except concentrated stock solutions containing phosphate or sulphate.

Regular feeding of nitrate nitrogen by split applications helps to ensure crops are functioning efficiently throughout the season, right through to harvest. Combining nitrate nitrogen with calcium not only supports the growth processes, it also enhances crop quality. This ensures better health and strength to resist decay and breakdown in storage.

Benefits

Supplies readily available nitrogen and calcium for high yields and superior quality

Free flowing prills which dissolve quickly for easy application without residue

Easily applied through fertigation systems which reduces time and labour
