<b>W:</b>	West.

## 1. INTRODUCTION

Two dust deposition gauges are used for measuring dust deposition at eastern and western site boundaries. Position of the sampling inlet of the dust deposition gauge was selected according to the AS/ NZS 3580.1.1:2007.

This method for dust deposition has an associated Australia Standard AS 3580.10.1. Particulate matter sampled by this method is predominantly dust particles which, because of their size, rapidly settle from the air. This method is used primarily to establish long term trends and to investigate localized dust fall.

**Table 1: Positioning requirements of sampling inlet from AS/NZS 3580.1.1:2007.**

Pollutant	Height about ground to sampling inlet (m) for ground level based site	Other locating criteria for sampling inlet (minimum requirements)
Dust deposition	2 ± 0.2	≥ 5 m from source Clear sky angle 120 degrees Unrestricted airflow of 360 degrees around sample inlet 10 m from drip line of trees No extraneous sources

## 2. SCOPE OF WORKS

This report includes the analysis of dust deposition gauges between 24<sup>th</sup> February and 3<sup>rd</sup> August 2013. Samples were sent to ALS laboratory in Newcastle. This is a NATA accredited laboratory to ensure quality assurance.

Appendix A includes Chain of custody, Certificate of analysis, Quality control report and Interpretative Quality Control report.

## 3. AMBIENT AIR QUALITY CRITERIA

Boundary monitoring for dust deposition will be undertaken to ensure compliance with the criteria outlined in Table 1. These criteria have been adopted from the DEC NSW document Approved Methods and Guidance for the Modelling and Assessment of Air Pollutants in New South Wales (revised 2005). The trigger threshold for dust deposition at the site boundary monitoring locations has been set at no more than 2 mg/m<sup>2</sup>/month above baseline levels, as per NSW regulations.

**Table 1. Adopted Ambient Air Quality Criteria**

Species	Averaging Period	Air Quality Criteria	Maximum Allowable Exceedences
Dust deposition	1 year (total)	4 g/m <sup>2</sup> /month	Nil
	1 year (increase)	No more than 2 g/m <sup>2</sup> /month above baseline	Nil
Source: "Approved Methods and Guidance for the Modelling and Assessment of Air Pollutants in New South Wales" (Revised 2005)			

#### 4. RESULTS AND DISCUSSION

Laboratory analytical reports are included in Appendix A. Table 2 includes a summary of the sampling results.

**Table 2. Summary of analysis' results.**

Sample ID	Date in/time	Date out/time	Results					
			Total Soluble Matter		Total Insoluble Matter		Total Solids	
			g/m <sup>2</sup> .month	mg	g/m <sup>2</sup> .month	mg	g/m <sup>2</sup> .month	mg

##### Dust deposition Eastern site boundary

On April and May, eastern monitoring equipment was upwind, thus not being impacted significantly by dust due to site contribution. Results at Eastern site (TBP-DG-E-0002, TBP-DG-E-0003, TBP-DG-E-0004, TBP-DG-E-0005) were within thresholds trigger limits. Sample ID TBP-DG-E-0001 was broken during transportation to ALS laboratory in Newcastle.

##### Dust deposition Western site boundary

Sample ID TBP-DG-W-0001 was placed between 24/02 and 26/03 on the West side. The total solids were 2.8 g/m<sup>2</sup>.month, within trigger limits.

On April and May, predominant winds were East to West and Southeast to Northwest, and most of days between 6 and 11 m /s. Owing to that, west air quality monitoring equipment was downwind, thus recording site contributions. Samples TBP-DG-W-0002, TBP-DG-W-0003 and TBP-DG-W-0004 have exceeded the trigger limits.

**Table 3: Summary of Blasting operations between 18<sup>th</sup> March and 31<sup>st</sup> July 2013.**

Blast Design (TRS-WBH- BLST-)	Date	Time	Area (refer to Figure 2 below)
001	18-Mar-13	17:15	Area 1 S outhern Face
002	27-Mar-13	17:26	Area 1 S outh to north
003	10-Apr-13	17:30	Area 1
004	17-Apr-13	17:24	Area 1
005	24-Apr-13	17:16	Area 1 & 2
006	1-May-13	17:16	Area 1
007	8-May-13	17:24	Area 1 & Area 3
008	16-May-13	17:30	Area 1, Area 2 and Area 3
009	22-May-13	17:15	Area 1, Area 2 and Area 3
010	14-Jun-13	17:30	Main access
011	20-Jun-13	17:30	Main access
012	31-Jul-13	17:30	Main access

The causes of these exceedances are:

- Blasting on Channel North, main access and Areas 1/2. Crushing of material was performed in Areas 1 and 2.
- Clearing, grubbing and excavation activities for the construction of Main Access and North channel.
- Movement of friable material within/outside site in Area 1 and Northwest Access.
- Importing backfilling material for lay down area and quarantine area with road trains.

	TAN BURRUP PROJECT	02080	 TECNICAS REUNIDAS
	TAN BURRUP PROJECT COMPLIANCE ASSESSMENT REPORT (MS 870)	PAGE 9 OF 45	
	2-250-329-REP-TRE-8001_Att07	REV.: 00	

- Site remains unsealed at this stage of the Project execution.
- Weather conditions described above.

Sample TBP-DG-W-0002 was also left 35 days instead of 30 days, due to delays in the delivery of the spare container.

Mitigation measures in place are:

- Follow up of the water inventory consumed for dust suppression.
- Crushing activities will stop during breaks (smoking breaks and lunch time).

It was expected that once blasting and crushing activities were completed, and in general, site preparation is finalized, average of total solids in west side will be lower, and TAN Burrup Project will be able to comply with the average for the trigger limit in a period of one year.

This has been confirmed as per the analysis of TBP-DG-W-0005, which was placed between 01/07 and 03/08 on the West side. The total solids were 1.6 g/m<sup>2</sup>.month, within trigger limits.

**General Comments**

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 \* = This result is computed from individual analyte detections at or above the level of reporting

- Analysis as per AS3580.10.1-2003. Samples passed through a 1mm sieve prior to analysis. NATA accreditation does not apply for results reported in g/m<sup>2</sup>.mth as sampling data was provided by the client.
- No copper sulfate correction was applied to sample.

Project : TAN BURRUP PROJECT

#### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- No Laboratory Duplicate (DUP) Results are required to be reported.

Page : 4 of 4  
Work Order : EN1301291  
Client : TECNICAS REUNIDAS AUSTRALIAN BRANCH  
Project : TAN BURRUP PROJECT

#### Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

- No Method Blank (MB) or Laboratory Control Spike (LCS) Results are required to be reported.

#### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) Results are required to be reported.

#### Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Report

The quality control term Matrix Spike (MS) and Matrix Spike Duplicate (MSD) refers to intralaboratory split samples spiked with a representative set of target analytes. The purpose of these QC parameters are to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.

#### Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

#### Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: \_\_\_\_\_ Evaluation: \* = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)		Evaluation	Quality Control Specification
		DC	Regular	Actual	Expected

#### Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Total Soluble Matter (SM)	EA139	AIR	AS 3580.10.1 - 2003 A gravimetric procedure reporting Soluble Solids in deposited dust.
Total Insoluble Matter (TIM)	EA141	AIR	AS 3580.10.1 - 2003 A gravimetric procedure reporting Total Insoluble solids in deposited dust.
Total Solids (TS)	EA142	AIR	AS 3580.10.1 - 2003 A gravimetric procedure reporting Total Solids in deposited dust.

**Summary of Outliers**

**Outliers : Quality Control Samples**

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QM/ENV38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

**Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes**

- For all matrices, no Method Blank value outliers occur.
- For all matrices, no Duplicate outliers occur.
- For all matrices, no Laboratory Control outliers occur.
- For all matrices, no Matrix Spike outliers occur.

**Regular Sample Surrogates**

- For all regular sample matrices, no surrogate recovery outliers occur.

**Outliers : Analysis Holding Time Compliance**

This report displays Holding Time breaches only. Only the respective Extraction / Preparation and/or Analysis component is/are displayed.

- No Analysis Holding Time Outliers exist.

**Outliers : Frequency of Quality Control Samples**

The following report highlights breaches in the Frequency of Quality Control Samples.

- No Quality Control Sample Frequency Outliers exist.

#### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LDR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 \* = This result is computed from individual analyte detections at or above the level of reporting

- Analysis as per AS3580.10.1-2003. Samples passed through a 1mm sieve prior to analysis. NATA accreditation does not apply for results reported in g/m<sup>2</sup>.mth as sampling data was provided by the client.
- No copper sulfate correction was applied to all samples.
- Sample exposure period outside AS 3580.10.1 specifications of 30 ± 2 days

#### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

Page : 4 of 4  
 Work Order : EN1301760  
 Client : TECNICAS REUNIDAS AUSTRALIAN BRANCH  
 Project : 2080 TAN BURRUP PROJECT

**Method Blank (MB) and Laboratory Control Spike (LCS) Report**

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

- No Method Blank (MB) or Laboratory Control Spike (LCS) Results are required to be reported.

**Matrix Spike (MS) Report**

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) Results are required to be reported.

**Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Report**

The quality control term Matrix Spike (MS) and Matrix Spike Duplicate (MSD) refers to intralaboratory split samples spiked with a representative set of target analytes. The purpose of these QC parameters are to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.

### Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Method	Sample Date	Extraction / Preparation			Analysis			
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

#### Summary of Outliers

##### Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QW/EN38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

##### Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- For all matrices, no Method Blank value outliers occur.
- For all matrices, no Duplicate outliers occur.
- For all matrices, no Laboratory Control outliers occur.
- For all matrices, no Matrix Spike outliers occur.

##### Regular Sample Surrogates

- For all regular sample matrices, no surrogate recovery outliers occur.

##### Outliers : Analysis Holding Time Compliance

This report displays Holding Time breaches only. Only the respective Extraction / Preparation and/or Analysis component is/are displayed.

- No Analysis Holding Time Outliers exist.

##### Outliers : Frequency of Quality Control Samples

The following report highlights breaches in the Frequency of Quality Control Samples.

- No Quality Control Sample Frequency Outliers exist.

#### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LDR of a reported result differs from standard LDR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting

- Analysis as per AS3580.10.1-2003. Samples passed through a 1mm sieve prior to analysis. NATA accreditation does not apply for results reported in g/m<sup>3</sup>.mth as sampling data was provided by the client.

#### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QM-EN338 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR- No Limit; Result between 10 and 20 times LOR- 0% - 50%; Result > 20 times LOR- 0% - 20%.

- No Laboratory Duplicate (DUP) Results are required to be reported.

 Project : 2080 - Tan Burrup Project

**Method Blank (MB) and Laboratory Control Spike (LCS) Report**

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

- No Method Blank (MB) or Laboratory Control Spike (LCS) Results are required to be reported.

**Matrix Spike (MS) Report**

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) Results are required to be reported.

**Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Report**

The quality control term Matrix Spike (MS) and Matrix Spike Duplicate (MSD) refers to intralaboratory split samples spiked with a representative set of target analytes. The purpose of these QC parameters are to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.

### Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Method	Sample Date	Extraction / Preparation			Analysis			
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

#### Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Method	Method	Matrix	Method Description
Total Soluble Matter (SM)	EA139	AIR	AS 3580.10.1 - 2003 A gravimetric procedure reporting Soluble Solids in deposited dust.
Total Insoluble Matter (TIM)	EA141	AIR	AS 3580.10.1 - 2003 A gravimetric procedure reporting Total Insoluble solids in deposited dust.
Total Solids (TS)	EA142	AIR	AS 3580.10.1 - 2003 A gravimetric procedure reporting Total Solids in deposited dust.

#### Summary of Outliers

##### Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QW/EN38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

##### Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- For all matrices, no Method Blank value outliers occur.
- For all matrices, no Duplicate outliers occur.
- For all matrices, no Laboratory Control outliers occur.
- For all matrices, no Matrix Spike outliers occur.

##### Regular Sample Surrogates

- For all regular sample matrices, no surrogate recovery outliers occur.

##### Outliers : Analysis Holding Time Compliance

This report displays Holding Time breaches only. Only the respective Extraction / Preparation and/or Analysis component is/are displayed.

- No Analysis Holding Time Outliers exist.

##### Outliers : Frequency of Quality Control Samples

The following report highlights breaches in the Frequency of Quality Control Samples.

- No Quality Control Sample Frequency Outliers exist.

### Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Method	Sample Date	Extraction / Preparation			Analysis			
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation	
<b>EA139: Total Soluble Matter</b>								
Dust Gauge - Copper Sulfate (EA139)								
TBP-DG-E-0004 - 30/05/13 - 01/07/13	TBP-DG-W-0004 - 30/05/13 - 01/07/13	01-JUL-2013	---	28-DEC-2013	---	10-JUL-2013	28-DEC-2013	✓
<b>EA141: Total Insoluble Matter</b>								
Dust Gauge - Copper Sulfate (EA141)

### Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		DC	Regular	Actual	Expected	Evaluation

#### Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Description
Total Soluble Matter (SM)	EA139	AIR	AS 3580 10.1 - 2003 A gravimetric procedure reporting Soluble Solids in deposited dust.
Total Insoluble Matter (TIM)	EA141	AIR	AS 3580 10.1 - 2003 A gravimetric procedure reporting Total Insoluble solids in deposited dust.
Total Solids (TS)	EA142	AIR	AS 3580 10.1 - 2003 A gravimetric procedure reporting Total Solids in deposited dust.

#### Summary of Outliers

##### Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QW/EN38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

##### Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- For all matrices, no Method Blank value outliers occur.
- For all matrices, no Duplicate outliers occur.
- For all matrices, no Laboratory Control outliers occur.
- For all matrices, no Matrix Spike outliers occur.

##### Regular Sample Surrogates

- For all regular sample matrices, no surrogate recovery outliers occur.

##### Outliers : Analysis Holding Time Compliance

This report displays Holding Time breaches only. Only the respective Extraction / Preparation and/or Analysis component is/are displayed.

- No Analysis Holding Time Outliers exist.

##### Outliers : Frequency of Quality Control Samples

The following report highlights breaches in the Frequency of Quality Control Samples.

- No Quality Control Sample Frequency Outliers exist.

#### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM, in house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting

- Analysis as per AS3580.10.1-2003. Samples passed through a 1mm sieve prior to analysis. NATA accreditation does not apply for results reported in g/m<sup>2</sup>.mth as sampling data was provided by the client.
- No copper sulfate correction was applied to samples.
- Sample exposure period outside AS 3880.10.1 specifications of 30 ± 2 days

#### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QM-EM33 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- No Laboratory Duplicate (DUP) Results are required to be reported.
